LogistiVIEW Company Overview

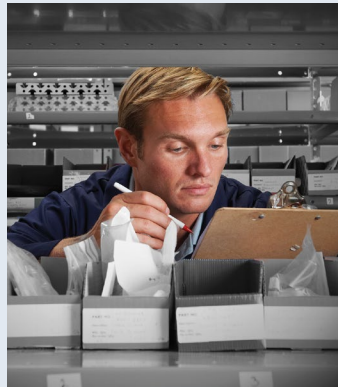

Fusing Worker and Technology in Industry 4.0

LogistiVIEW extends the abilities of the frontline worker by connecting business systems, operational processes, and Artificial Intelligence with human intelligence.

Combining **Augmented Reality, Artificial Intelligence, and computer vision**, LogistiVIEW's patent-pending software for industrial smart devices transforms complex data into actionable instructions enabling workers to rapidly complete tasks. The result is more productivity, without costly infrastructure expansion.

Committed to delivering data in a **visual and instantly-recognizable way**, LogistiVIEW enhances both productivity and job satisfaction across supply chain operations.

AR, AI, & Computer Vision Meet Today's Workforce

The Old Way

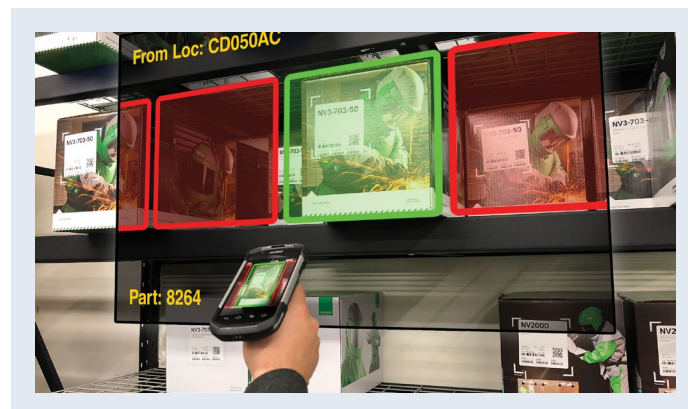

The LogistiVIEW Way

Products

LogistiVIEW products combine leading computing and visualization technologies optimize the way work is performed.

- **Vision Picking & Put Wall Solution** – smarter, more intelligent order fulfillment for warehouse distribution centers through AR and smart glasses
- **Connected Worker Platform** – enterprise productivity toolset connecting human intelligence with complex data for better, more informed decisions

History

LogistiVIEW was founded in 2014 by CEO Seth Patin. After seeing firsthand how even warehouses with millions of dollars of technology investments continued to struggle with inefficiency, Seth began to look for a better way.

Combining the **innate skills of a human worker with technology** in an enabling, and easy-to-use way, LogistiVIEW became the first and only enterprise wearable platform **designed from the ground up** around AR, AI, computer vision, and a configurable workflow engine.

Today, LogistiVIEW's award-winning solution is deployed across distribution operations, manufacturing, and retail.
